🗯️ AI Answer

Answer the question using the context below.

Context: Supervised learning To describe the supervised learning problem slightly more formally, our Learning To perform supervised learning, we must decide how we're going to represent Let's start by talking about a few examples of supervised learning problems.

Question: supervised learning

Answer briefly: Supervised learning is a type of machine learning that's used to predict y , the dependent variable, given the input x , the explanatory variable(s). These examples show that supervised learning is a problem that we have to deal with in
